## TECHNOLOGY

### ALFA D.N.A.

Derived from racing experience, Alfa D.N.A. is the exclusive Alfa Romeo driving mode selector which, by acting on engine, brakes, steering, gearbox, suspension and accelerator, perfectly adapts the vehicle's performance to suit the driver's style and the road conditions.

There is a choice of three modes: Dynamic which optimises performance, Natural for optimum fuel economy and All-weather for tackling poor weather and low grip conditions. It offers simple, intuitive use: just change the selector near the gear lever.

### ALFA TCT

Alfa Twin Clutch Transmission is the innovative twin dry clutch semi-automatic transmission which allows the next gear to engage while the previous one is still engaged. The ALFA TCT guarantees driving comfort and a sporty feel that far surpass those offered by traditional automatic transmissions, coupled with improved efficiency and lower fuel consumption.

### BENEFIT-IN-KIND TAXATION

The company car Benefit-in-Kind Taxation scale is linked to the CO<sub>2</sub> emissions level. The table right shows the percentage of the car price to be taxed (P11D value). Below you can also find a simple explanation useful to calculate the BIK.

### EXAMPLE OF HOW TO CALCULATE BIK

- Look at the table on the right and find the BIK tax banding to be applied according to the CO<sub>2</sub> emissions of your car. (For example a Diesel car emitting 99g CO<sub>2</sub> is 19%).
- Work out the car's price to be taxed (P11D value) which is calculated as: Total Retail Price (Basic Price + VAT) + Number Plate (25.53) + Delivery costs (£615) + Options (Including VAT).
- Calculate the BIK as follows: P11D value x BIK tax banding percentage.
- Multiply BIK figure (from 3.) by your personal tax band – i.e. 20% or 40% to give your annual BIK costs.
